

# Data, priority setting, and timeline

Prof. dr. Anne Margriet Pot

Development of a National Dementia Plan for the Czech Republic

# Some observations

Expertise and engagement around the table, lack of awareness nation-wide, no data

Cross-cutting elements:

- ▶ Leadership and governance: Hanna=focal point?, steering group with representatives of different sectors
- ▶ Multi-sectoral collaboration: mostly researchers, no PWD and CGS, stakeholder ownership

Situational analysis:

- ▶ Importance of data on dementia (even roughly estimated)

# Data

- ❖ Situational analysis for plan: where are the gaps?
- ❖ Monitoring for evaluation, exchange and improvement, at the national and international level
- ❖ Advocacy!

# International resources

## World Health Organization

Dementia: [https://www.who.int/mental\\_health/neurology/dementia/en/](https://www.who.int/mental_health/neurology/dementia/en/)

Ageing and Health: <https://www.who.int/ageing/en/>

## Alzheimer's Disease International

<https://www.alz.co.uk/>

# Priority setting

- ❖ Looking at priorities of other countries?
- ❖ PERSON-with-dementia
- ❖ Broad multi-stakeholder engagement
- ❖ Cultural context
- ❖ Financial and human resources
- ❖ Natural hierarchy
- ❖ Disease trajectory
- ❖ Evidence-based action
- ❖ Burden of disease, cost-effectiveness, fairness

# Timeline

Have a horizon in line with:

- National developments (mental health programme)
- Global developments (dementia and healthy ageing)

Keep it simple: a few successes are better than no change at all

Keep it agile: Stepwise approach
